

DAKTRONICS MOTORSPORTS INTERFACE PRODUCT SPECIFICATIONS

The Daktronics Motorsports Interface software collects data from a number of transponder timing systems and race results programs to send the latest race information to Daktronics scoreboards and LED displays. If no timing system is available, the interface can also be operated in Manual Mode where users have full control of race positions, lap counts, and flag status.

PRODUCT SPECIFICATIONS:

MAJOR FEATURES:

- Works with transponder and results timing systems such as AMB RentiX, ChronX, and Orbits and Westhold Race Manager, Timegear (Multi-loop), Formula One, Dorna, and RIS
- Automatically collects race data from the timing and results software and formats it for use with Daktronics displays; automatic event and protocol detection simplifies program operation
- Virtual onscreen pylon shows top ten fixed positions, two rolling positions, alphanumeric car numbers, current lap/flag, and qualifying times
- Controls standard numeric racing scoreboards and uses Daktronics Enhanced Real Time Data (ERTD) to present full driver names and car numbers, current positions, lap times, and more on LED message centers and video displays
- Supports multiple classes in a single race, and uses color real-time data to sort results divided into each class or by every competitor

MINIMUM COMPUTER REQUIREMENTS:

- Microsoft® Windows® 2000/XP/Vista/7 or better
- Microsoft® .NET Framework 2.0
- IBM® or 100% compatible PC, Pentium® 1.3 GHz or higher
- 512MB RAM
- 20MB free disk space
- Network or serial connection for receiving/sending data
- Mouse & keyboard
