

# Audio ITT Computer Setup

*Rev 1 – 9 April 2018*

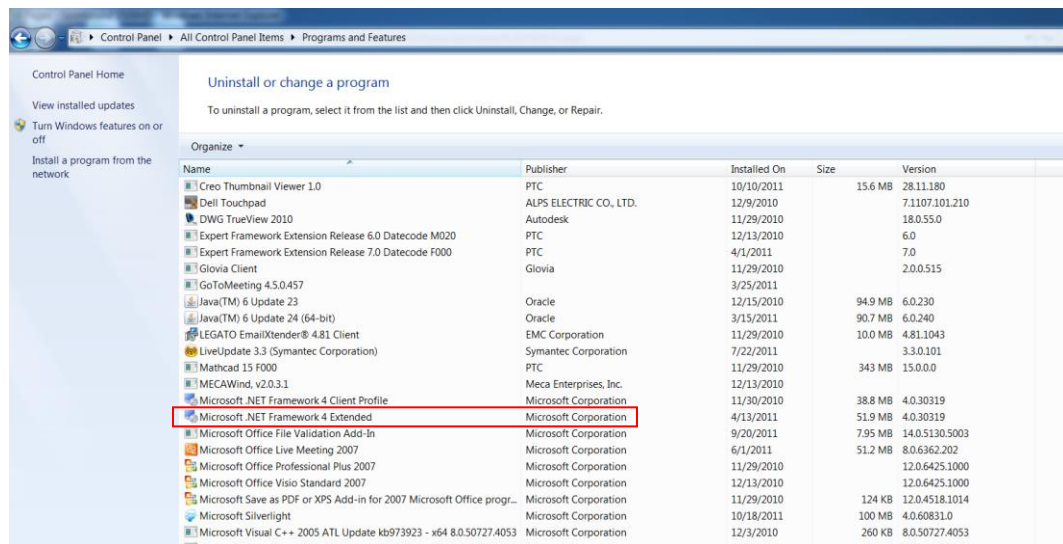

- Complete the steps in this guide prior to arriving to Friday's class on Daktronics Audio Products as you will need to connect your computer to the Daktronics sound systems for testing.
    - Install Cobranet Discovery and follow setup guide
    - Know how to set static IP on computer
    - Download and unzip Monitor Panels
    - Download firmware files and store in appropriate folder
-

# Section 1: Software Installation

Each piece of software is free to download and use. Monitor Applications are only available through Daktronics. Monitor Applications are not used with Custom Audio Systems.

## 1.1 Microsoft .NET Framework 4

1. Verify that Microsoft.NET Framework 4 is installed on your computer by going to **Start > Control Panel > Programs and Features**.

2. If this program is not installed on your computer, you must download and install it from the internet or use the link below before proceeding.

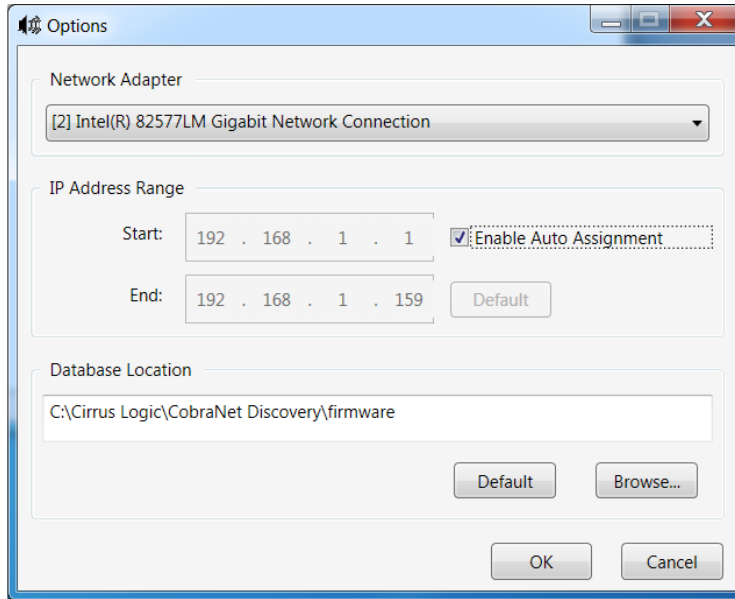

<http://www.microsoft.com/downloads/en/details.aspx?FamilyID=9cfb2d51-5ff4-4491-b0e5-b386f32c0992&displaylang=en>

## 1.2 CobraNet Discovery

1. Download and Install CobraNet Discovery version 4.0.5:  
<http://www.cobranet.info/downloads/disco/405>
2. Once CobraNet Discovery is installed, there should be a shortcut on the Desktop. Double-click the icon to open the program.
3. In CobraNet Discovery, go to **Tools > Options**.

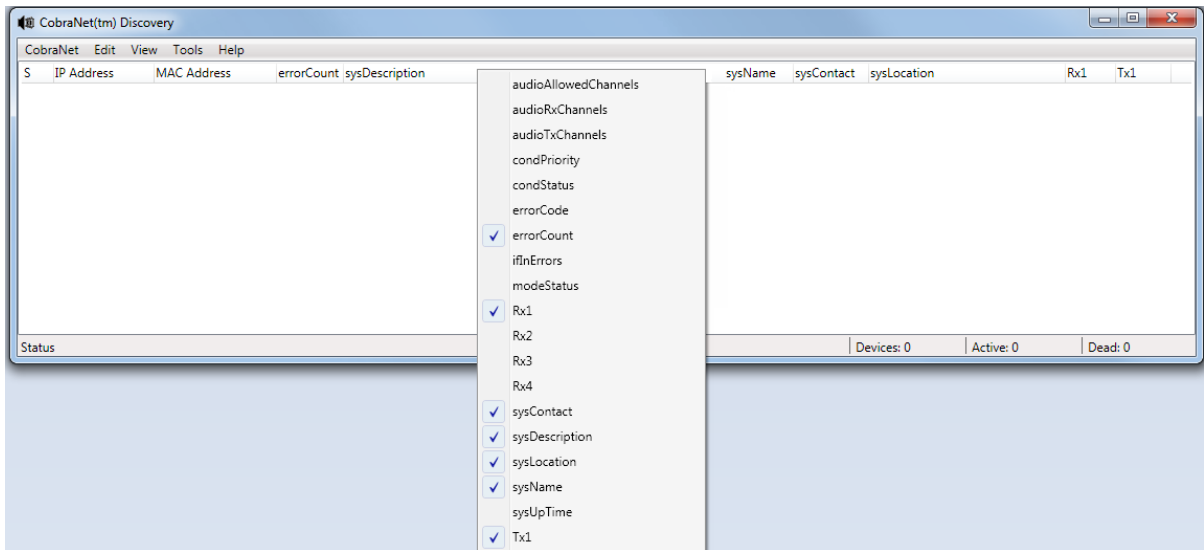

- a. Select the *Network Adapter* you will use to connect to the amplifier(s).
- b. Set the *Start* and *End IP Address Range* as follows:  
  
Start IP Address: 192.168.1.1  
End IP Address: 192.168.1.159
- c. Enable **Auto Assignment**, and then click **OK**.

4. Ensure all of the data fields below are visible:

IP Address    MAC Address    errorCount    sysDescription    sysName    sysContact    sysLocation    Rx1    Tx1

**Note:** To add or delete columns, right-click on one of the column headings. Click on the data fields to display in the list that appears.

5. Go to "C:\Cirrus Logic\CobraNet Discovery", right-click on "CNDisco.exe.config", and open the file with Notepad or Notepad++.
6. Find the `<add key="Advanced feature" value="0" />` attribute. Change the value from "0" to "1", and then **Save** and close file.

```

## 1.3 Monitor Application

1. Go to <http://dakfiles.daktronics.com> and navigate to **Audio > Software Installation > Monitor Panels**:

Download the specific zip file(s) you need.

2. Right-click on a downloaded zip file and select **Extract All**. Click **Extract** to create a folder in the location you saved the zip file. Repeat this step for all downloaded zip files.
3. Inside the unzipped folder, double-click the .exe file to open the program.

| Name   | Date modified      | Type                  | Size      |

For more information about the monitor application, refer to **Section 6**.

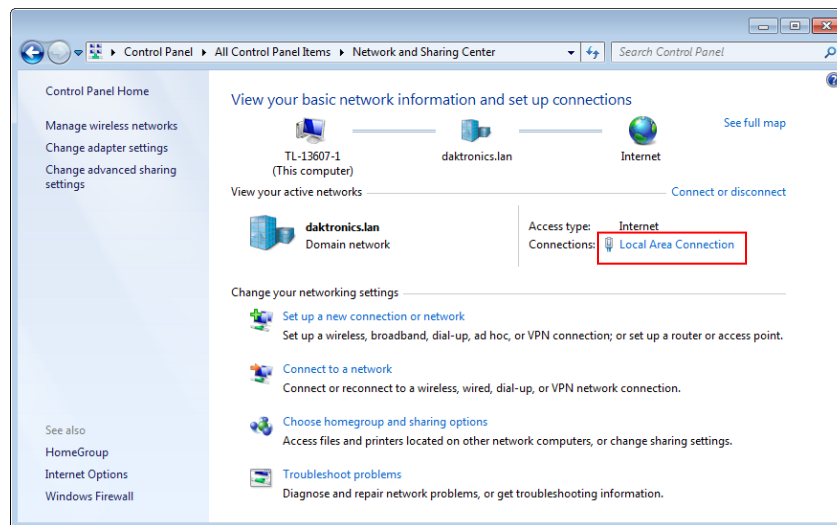

## Section 2: Computer IP Settings

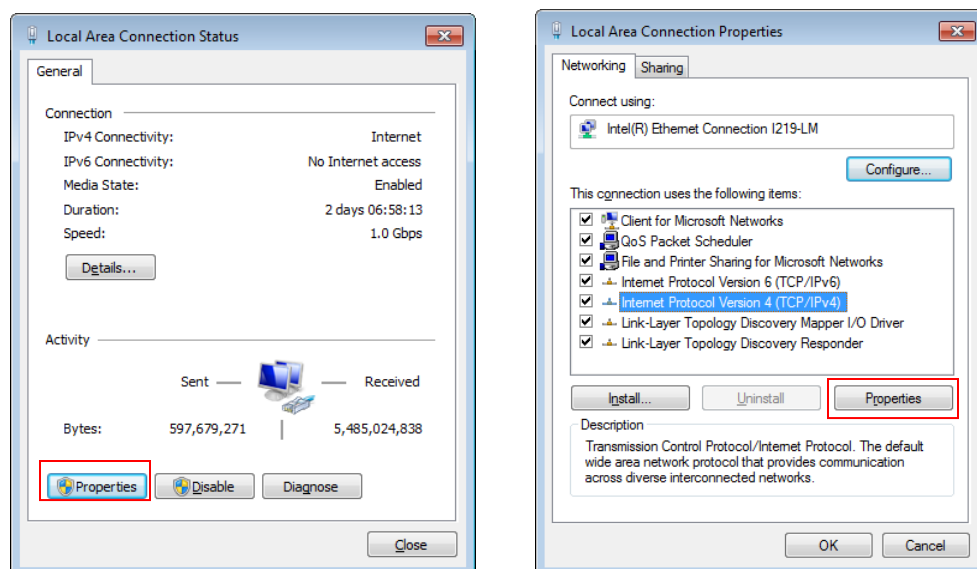

With all the necessary software installed, you must now change the computer's IP settings to connect to the amplifiers.

**Note:** You can either change your IP settings each time you want to connect (**Option A**), or you can set up your computer to select an alternate IP address if it can't find one (**Option B**). Note that Option B does take longer for your computer to read and connect to CobraNet Discovery.

1. Go to **Start > Control Panel > Network and Sharing Center**.
2. Click on your **Local Area Connection**.

3. Click on **Properties**. Select your **Internet Protocol Version # (TCP/IPv#)**, and then click **Properties**.

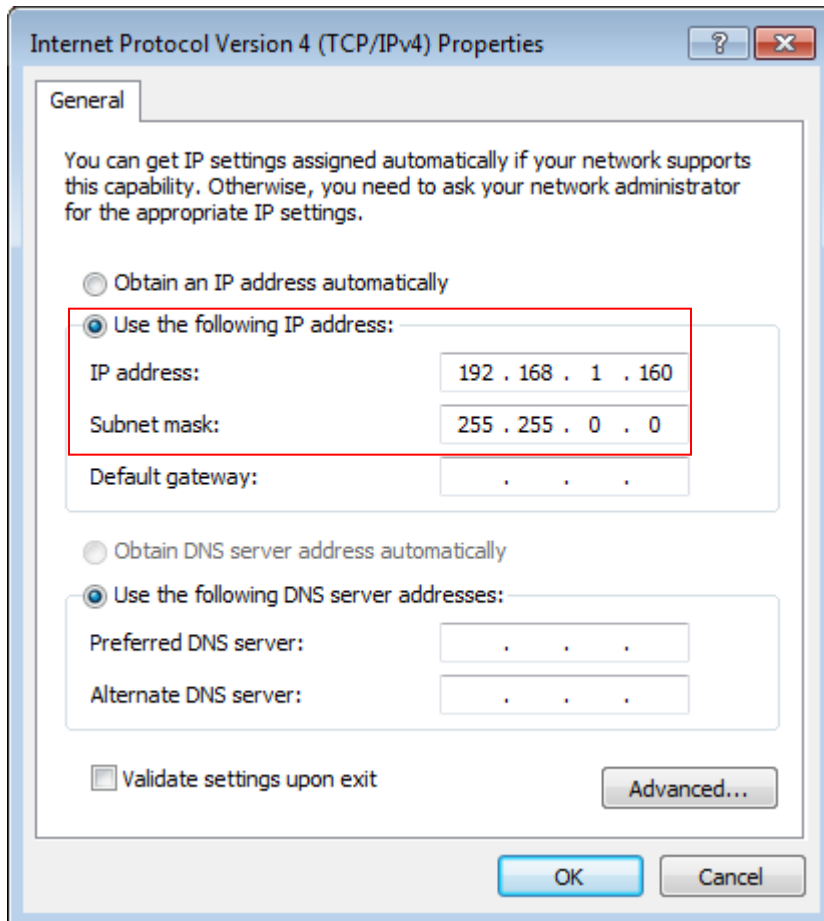

4. Follow the steps in either **Option A** or **Option B**.

## 2.1 Option A

Click on **Use the following IP address** and enter the *IP address* and *Subnet mask* as shown below. Click **OK** three times when finished to save the settings.

IP Address: 192.168.1.160  
Subnet mask: 255.255.0.0

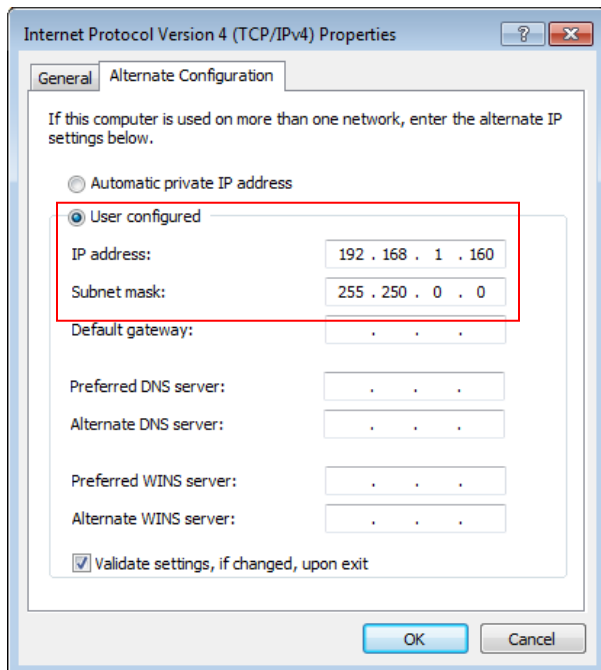

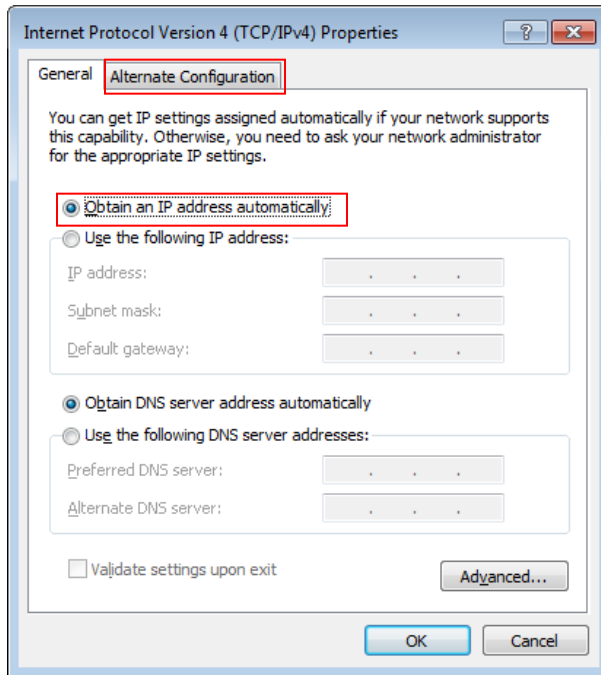

**Note:** Be sure to revert to previous settings when no longer servicing audio.

## 2.2 Option B

Click on **Obtain an IP address automatically** and then click on the **Alternate Configuration** tab. Click **User Configured**, and enter the *IP address* and *Subnet mask* as shown below. Click **OK** three times when finished to save the settings.

IP Address: 192.168.1.160  
Subnet mask: 255.255.0.0

## 2.3 Update Firmware

1. If not already loaded on your computer, download the latest firmware files by going to <http://dakfiles.daktronics.com> and navigate to **Audio > Servicing Sportsound Systems > Updating Firmware:**

---

[\[To Parent Directory\]](#)

|                    |         |   |
|--------------------|---------|---|
| 5/13/2016 10:20 AM | 1177648 | <a href="#">Sportsound Firmware Files.zip</a> |
| 7/17/2017 5:26 PM  | <dir>   | <a href="#">SS1000 Firmware</a>               |

---

Download the “Sportsound Firmware Files” zip file. Right-click on the file and select **Extract All**. Click **Extract** to create a folder in the location you saved the zip file.

2. Copy all firmware (.bin) files from the unzipped folder into “C:\Cirrus Logic\CobraNet Discovery\firmware”.
